Standard Features:

• Advanced Linear Amplifiers Provide Very Low Voltage Distortion, no Switching Noise, Fast Voltage and Current Slew Rates, Exceptionally Low Output Impedance and High Peak Current Capability
• Single, split or three phase selectable output from front panel or bus command
• 15 to 5,000 Hz. Full Power Bandwidth Operation – 5Hz to 50KHz small signal bandwidth, 3dB at 10% of full voltage
• Precision Voltage Programming – 0.05% with Continuous Self-Calibration (CSC) engaged
• True-RMS Metering of Volts, Amps, and Power
• Color touch screen front panel operation
• LAN (LXI), USB, GPIB and RS-232 Interfaces
• Arbitrary Waveforms
• Transients for Static and Dynamic Test Applications
• Programmable Output Impedance
• Harmonic Analysis and Waveform Synthesis
• PPSC Manager Windows 10 Software
• Embedded Web server

Model 360LMX
As the highest power member of Pacific Power’s LMX-Series family of high performance Liners, the 360LMX offers the same low output voltage noise and distortion, ease of installation, and high AC waveform fidelity as found in all of Pacific Power’s Linear AC Power Sources. Control and operational features provide a high degree of versatility and ease of use for applications ranging from simple, manually controlled frequency conversion to harmonic testing and sophisticated programmable transient simulation.

AC TEST POWER
All 360LMX models are equipped with a powerful micro-controller with the ability to operate as a fully integrated test system. This enables a variety of power conditions and transients to be applied to the device under test while metering and analyzing all output performance parameters. For higher power requirements, refer to the complete LMX series catalog.

FREQUENCY/ VOLTAGE CONVERSION
The 360LMX is an excellent source of stable AC Voltage over the frequency range of 15 to 5,000 Hz. The output frequency is quartz-crystal stabilized. Output voltages up to 135VL-N in single phase mode and up to 270VL-L in split phase mode are available on the 360LMX model and up to 600VL-L in split phase mode or 585VL-L in three phase mode on the 360LMXT model.

PHASE CONVERSION
With the ability to provide two or three phase output, the 360LMX is a good choice to convert one-phase line voltage into precisely controlled split (two-phase) or three phase output power.

6000 VA
15-5,000 Hz
1Ø → 0-338 V L-N
2Ø → 0-600 V L-L
3Ø → 0-338 V L-N /0-585 V L-L

Notes:
1. Rated output power is based on a combination of output voltage, current and load power factor. Values stated represent the rated capabilities of a given model. Consult factory for assistance in determining specific unit capabilities as they might apply to your application.
2. Output Form: Unit is operable as single phase with dual range capability or three phase. Output voltage ranges and 1Ø/2Ø or 3Ø conversions are selected by front panel or bus command.
3. Output voltage ranges listed are for standard units. VMAX is achievable with nominal input voltage at full load.

**Note 1:** Improves to less than 0.05% with external sense and CSC mode enabled. For transformer coupled voltage ranges, load regulation by step-up ratio is: 1.5:1 - 2%, 2.0:1 - 4%, 2.5:1 - 5%. Improves to < 0.1% with external sense and CSC mode enabled.

**Thermal and Load Power Factor Rating Curves**

Rated Continuous Load Current as a Function of Ambient Temperature and Power Factor and Output Voltage at Nominal Input Line.
