

# **AGX Series**

### Introducing the AGX Series

The Industry's Most Flexible, High Performing, and Intelligent All-in-1 Regenerative AC/DC Power Source

Constant Power

Scalable Power

Current

### **Key Features**

- All-in-1 AC/DC Power Source, Current Source & Load » 4-Quadrant AC & DC Power Source
- » AC/DC Electronic Load Option
- High Power Density Up to 21kW in 4U; Parallel up to 168kVA/kW per Cabinet, or Multiple Cabinets up to 252kW
- AC, DC and AC+DC Output Capability
- Single, Split, Three-Phase; Multi-Channel Mode » Isolated Neutrals Available (Option W)
- Constant Power Voltage Range: 350Vac L-N/606Vac L-L or ±500Vdc
- High Frequency Range:
- » DC, 15Hz 1200Hz
- » Extended Frequency Range 1Hz 3000Hz
- Galvanic Isolation from Facility AC Input to Output and Between Output Phases / Channels
- Silicon Carbide (SiC) Based Technology
- Exceptionally High AC Current
- Waveform capture and Scope display
- SmartSource Suite: Web Interface & Control
- IEC61000-4-13 Inter-Harmonics Test Option

### 🐨 🐨 👷 💭 Flexible Control

**AGX Series** 

#### All-in-1 Regenerative AC/DC Power Source

The AGX Series is a fully regenerative 4-quadrant AC and DC power source that can function as an AC power source, DC power supply, current source, and AC/DC load. The AGX's high-power density provides 6kVA/kW up to 21kVA/kW in a 4U chassis and can parallel up to 168kVA/kW in a single 19" cabinet. Multiple Cabinets can parallel up to 252kVA/kW.

The best-in-class AGX is modular by design and scalable in power. It has highly versatile channel outputs for different dynamic applications, and advanced control and programming capabilities.

The wide selection of power, frequency, and phase angle modes allow you to test a wide range of gridtied products in the renewable energy, electric vehicle charging, aerospace, and industrial markets. Easily test the UUT to regulatory compliance standards.

#### **Application Examples:**

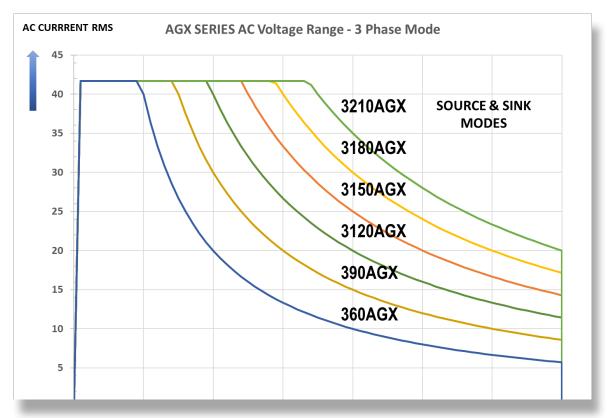

- Aerospace & Defense Power and Compliance Testing
- EV Charging, On Board Chargers (OBC), V2G, V2H and V2X
- Solar PV/Grid-Tied Inverters
- Energy Storage Systems (ESS), Home ESS
- Smart-Grid Simulation
- EMC Compliance Testing

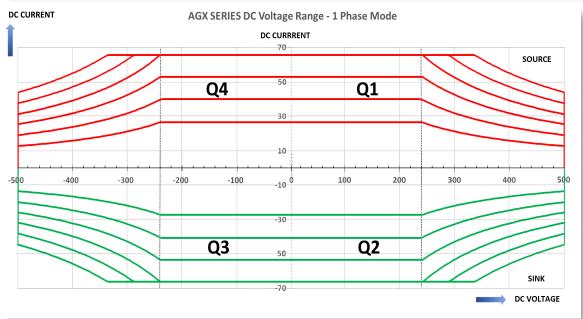

## **Constant Power Voltage Range**

The AGX Series uses a single, constant power voltage range for both higher current at lower voltage and higher voltages at lower currents eliminating the need to switch between voltage ranges.

Typical dual range systems cause temporary output power loss when switching between ranges interrupting power to the unit under test. The AGX's constant power voltage range allows for testing a broad range of conditions and test requirements without interruption of output power.

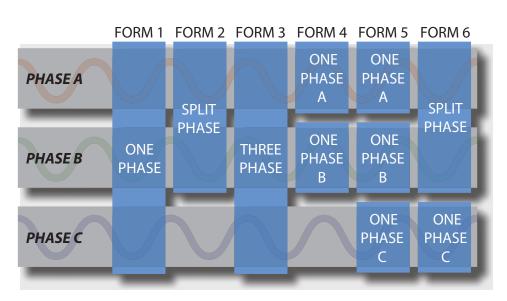

### **More Current at Low Voltage**

The AGX provides a broader range of current eliminating the risk of over or under sizing the power source. This reduces the need for additional capital investment. The diagram to the right illustrates the AGX's capability to provide 20% more current from 120V to 200V when compared to a typical unit that maxes out at 35A/phase.

## **Ultimate Flexibility With Six Output Configurations**

Simultaneous AC & DC Operation on Single Phases and Automatic Switching of Operation Modes

Note: Mixed Source / Load mode combinations available in Forms 4, 5 and 6.

Flexibly test a wide range of gridtied conditions and EUTs with six different output configurations in either source or load mode. Isolated neutrals give capability to operate in each phase as a different function: voltage source, current source, or load (option).

Forms 1 through 3 are common for three-phase AC sources or loads and single, split or three-phase AC connections. Forms 4 through 6 allow for two or three EUTs' to be tested with the same AGX source or load. This means that three independent single-phase 7 kW EUT's could be tested simultaneously using a single 21kW AGX unit. Form 5 supports different frequencies on each phase simultaneously.

### **Regenerative Power Saves Significant Energy and Costs**

Regenerative AC & DC power sources provide energy efficiency and significant cost savings by returning energy back to the facility or the grid. The AGX produces less heat, ensures a stable testing environment for reliability reducing the need for additional cooling systems. Regenerative bidirectional power flows are critical for simulating real-world conditions in transportation and renewable energy systems.

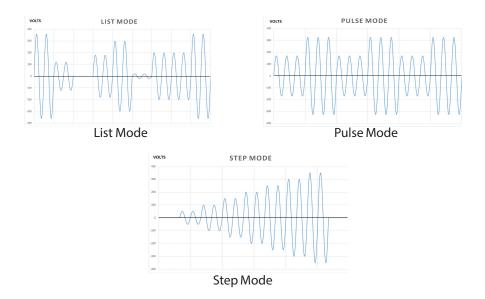

### **Wide Frequency Range**

Unlike traditional grid simulators, the AGX has a wide output frequency range which provides more flexibility. Standard range from 15Hz to 1200Hz. This is ideal for avionics and defense applications that require both 400Hz steady state frequency as well as 360Hz to 800Hz wild frequency ranges. The AGX also offers extended frequency range from 1Hz to 3000Hz.

### **Powerful Waveform & Measurement Tools**

The AGX has a built-in waveform digitizer with fast transient capabilities at 200µsec time resolution supporting LIST, PULSE and STEP modes. Waveform generation includes ten Standard, Sine, Square, Triangle, Clipped and Harmonic generation. Inter-harmonics can be added with Option C.

The waveform digitizer is complimented by a digital measurement system with scope function. Capture advanced measurements and waveforms.

AGX Series

## **User Friendly Control Options**

Multiple integrated control options include:

- Intuitive Touch Screen LCD Display with Soft Key driven Menus
- SmartSource Suite Web Interface
- •LAN, GPIB, RS232 & USB Interfaces, and ModBus (optional)
- Supports external touch screen monitor via Video Output Interface

# Simplify Test Automation with SmartSource Suite Remote Control Platform

Easily monitor, control, and manage testing with the AGX's SmartSource Suite remote control platform. Use the embedded, web browser interface with real-time control. Access control panels and test sequences on-premises or on any mobile device (laptop, phone, tablet) via secure client access.

- Full control and measurement capability
- Program settings and measurement read back including digital scope and harmonics data
- Extensive safety protection settings
- ·Waveform selection, preview and edit modes
- Execution of user's custom test sequences
- •Transient data entry and execution screen using a spreadsheet layout

## **Built-in Galvanic Isolation Reduces Safety Risks**

The AGX provides both facility-to-output isolation, and phase to phase or channel to channel isolation. Galvanic isolation provides complete separation between the input and output so there is no electron flow between channels. Channel to channel isolation provides flexibility to use each phase as its own independent power source with full frequency and voltage control. The AGX's fully isolated design reduces safety risks for the operator and prevents unexpected UUT damage by preventing unwanted current or ground loops. This built-in capability doesn't require a transformer which saves significant costs and space.

# Fully Test AC Power with 4-Quadrant Load (Option L)

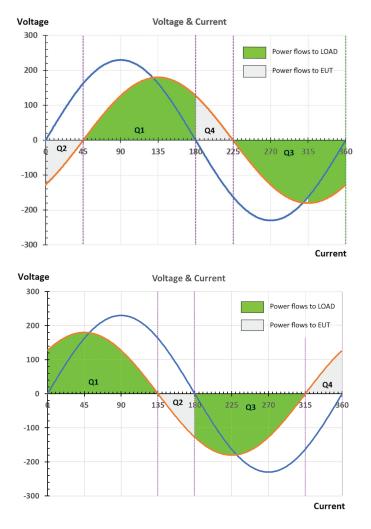

Optional load feature also supports testing PV inverters, V2G, EV Chargers, EVSE, batteries, UPS, and AC/ DC power supplies. A key advantage of the AGX Regenerative Load Option is its ability to operate in all four quadrants using programmable phase shift in CC or CS modes.

Compared to 2-Quadrant non-regenerative AC loads, the AGX allows simulation of inductive and capacitive loads to fully test AC power sources, as shown in the leading and lagging power factor examples.

The "L" Option adds Regenerative Electronic Load capability providing several AC and DC operating modes to push the boundaries of test environment. Simulate linear and non-linear loads (rectified), inductive and capacitive loads.

AC Modes: Constant Current, Constant Power & Apparent Power, Constant Resistance, Constant Voltage, CC+CR, CC / CS Rectifier Mode 1ø & 3ø

DC Modes: Constant Current, Constant Power, Constant Resistance, Constant Voltage, CR+CC

### **Current Source Mode**

The AGX Series supports Current Source mode. In this mode, AC or DC current is precisely controlled. Current and compliance voltage ranges are identical to this in source or load mode. Transient programming and user defined arbitrary current waveforms are available in this operating mode as well.

Current source mode is useful for testing of protection devices like fuses, switches, transformers or circuit breakers. Maximum current range is available in single phase mode.

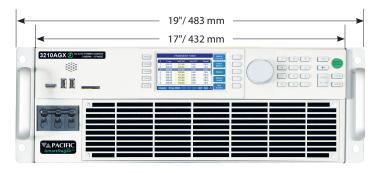

## **Rack Mount / Bench AGX Models**

| 3120AGX-4 | 1, 2 & 3 Phase | 12 kVA, kW / 12 kW                       | 0-350 Vac / 0-500 Vdc                        | 33.3 Arms / 16.7 Adc                                   | 100 Arms / 50.0 Adc                | 4U Chassis  |
| 3150AGX-4 | 1, 2 & 3 Phase | 15 kVA, kW / 15 kW                       | 0-350 Vac / 0-500 Vdc                        | 41.7 Arms / 21.0 Adc                                   | 125 Arms / 62.5Adc                 | 4U Chassis  |
| 3180AGX-4 | 1, 2 & 3 Phase | 18 kVA, kW / 18 kW                       | 0-350 Vac / 0-500 Vdc                        | 41.7 Arms / 21.0 Adc                                   | 125 Arms / 62.5Adc                 | 4U Chassis  |
| 3210AGX-4 | 1, 2 & 3 Phase | 21 kVA, kW / 21 kW                       | 0-350 Vac / 0-500 Vdc                        | 41.7 Arms / 21.0 Adc                                   | 125 Arms / 62.5Adc                 | 4U Chassis  |

Note 1: Rated power shown is for Three Phase or Single Phase mode operation. For Split Phase mode, rated power is 2/3. Note 2: For Voltage ranges above 333Vac some frequency and Vthd restrictions apply.

## **AGX Dimensions & Accessories**

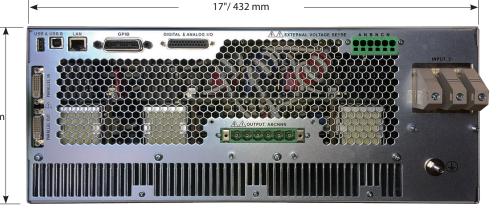

The AGX is designed for bench top or 19" equipment rack operation. Product is shown with included rack mount handles.

Depth of chassis is only 25.0 inch / 635mm.

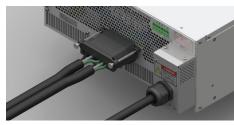

Note: Units can be zero-stacked in 19" EIA cabinet when using optional rack-slides. When using L-brackets, allow 1U space between units.

The AGX Rear Panel provides connections for AC Input, AC or DC Output, External Sense, Aux I/O and remote control interfaces. Product is shown with standard GPIB Interface.

7"/ 178 mm (4U)

### **Safety Cover & Strain Relief Kit Option**

This optional kit includes covers for AC input and AC & DC Output connections. Both covers include wire strain relief to prevent accidental release of input or output wiring.

Note: AC input and AC output wiring is NOT included.

### Modular Power up to 168kW/333A per Cabinet

The AGX Series provides modular and scalable power to meet changing test requirements. Easily parallel multiple chassis to reach up to 168kW with 333Amps per cabinet. Cabinets can be paralleled up to 252kW. The ease of reconfiguration allows for flexible test set ups and reduces downtime for repairs or maintenance. The units' shallower depth also allows it to fit into typical 31.5-inch / 800.1mm depth cabinets with ample room for air-flow and wiring.

## **Parallel Systems Installed in19" EIA Rack Cabinet**

Note 1: For Split Phase mode, rated power is 2/3.

Note 2: For Voltage ranges above 333Vac some frequency and Vthd restrictions apply.

Contact factory for cabinet output wiring modifications to support single phase AC mode on cabinets above 84kVA.

Auxiliary Models (No Controller)

#### AGX Series Model Number Encoder:

Note: Solid outlined fields must be specified. Dashed outlined

#### Order Example 3210AGX-4CLW

 Bench Model, 21 kVA, 3-Phase, AC & DC Regenerative Power Source with USB, RS232, LAN, GPIB & AUX I/O

#### Typical Delivery Items

- Power Source
- Rack Mount Handles
- Certificate of Compliance

#### Available Accessories

- Output shorting adapter for single phase output mode use. P/N 160086 (not for W)
- Paralleling Cable, 1 Ft. (Included with Aux NC models). P/N 778036
- Rack slides. P/N 703251

#### Software Options

#### Test Sequences

- IEC Test Suite Includes IEC 61000-4-11p, IEC 61000-4-14, IEC 61000-4-17, IEC 61000-4-27p, IEC 61000-4-28, IEC 61000-4-29p and IEC 61000-4-34
- IEC 61000-4-13 (Option C)
- MIL-STD 1399-300B & -300-1 US
- DoD, Shipboard Power, AC Power Groups
- IEEE 1547.1-2020
- Semi-F47-0706
- KS C 9610-4-11, KS C 9610-4-29

#### Test Sequences - Avionics

- ABD0100.1.8 Airbus A380, AC & DC Power Groups
- ABD0100.1.8.1 Airbus A350, AC & DC Power Groups
- AMD24C Airbus A400M, AC & DC Power Groups
- Boeing 787B3-0147 B787, AC & DC Power Groups
- MIL-STD704 US DoD, AC & DC Power Groups
- RTCA-DO160 Section 16, AC & DC Power Groups

Test Sequence Options require use of the standard SmartSource Suite via LAN or USB, or PPSC Test Manager Windows Software. Contact factory for details.
